

Your Home agent, inside Claude

You already have an agent of your own at your Home (on Faithnet, that is **www.faithnet.me**). It knows your records, the organizations you belong to, and the way you like things done. The **Home MCP connector** lets you reach that agent from inside Claude — in a normal Claude conversation, on the web or in the desktop app — so Claude can ask it things as you, find and talk to other agents through it, and show you what it did.

Three things stay true the whole time:

1. **Claude never holds your keys or your sign-in.** You give the connector one narrow permission — “ask my agent as me” — by signing it at your Home. That is all it holds.
2. **Anything that would change something waits for you.** Sending money, inviting someone, publishing — your agent pauses and gives you a link to your Home, where you sign. Claude cannot sign for you.
3. **Every answer is your agent’s answer, with its evidence.** Claude reports it and says where it came from. Every run leaves a record you can read later, in Claude or at your Home.

1. Before you start

- **A Home account** at www.faithnet.me with a passkey (or wallet) that you can use in your browser. If you can sign in there, you are ready.
- **A Claude plan that allows custom connectors** (Claude Pro, Max, Team or Enterprise). On Team and Enterprise plans an administrator may need to add the connector for the organization first.
- The connector address:

`https://home-mcp-faithnet.richardpedersen3.workers.dev/mcp`

2. Set up (about two minutes)

1. In Claude, open **Settings → Connectors**.
2. Choose **Add custom connector**.
3. Give it a name you will recognize — for example **My Home agent** — and paste the connector address above.
4. Click **Add**, then **Connect**.

5. Your browser opens **www.faithnet.me**. Sign in the way you always do (passkey or wallet).
6. Your Home shows what you are about to allow: let this assistant ask your agent as you. Read it, then approve. This writes a signed permission for this connector only. It does not let it move money, change records or act for you — those still need your signature each time.
7. You are sent back to Claude. The connector shows as connected.
8. In a new chat, open the tools menu (the **+** or **Search and tools** control under the message box) and make sure **My Home agent** is switched on.

Check it works. Type:

What have I asked my agent for recently?

Claude should come back with your recent runs (or say there are none yet) and name your agent — something like `alice.me` — as the one that answered.

Claude Desktop works the same way: the connector you add on the web is available in the desktop app once you sign in to the same Claude account.

3. What Claude can do through the connector

Claude gets a small, fixed set of abilities. In plain words:

Ability	What it does	Changes anything?
Ask	Puts your words to your own agent — about your records, your organizations, your household, your treasury — or to an organization you belong to, by name (for example <code>missionexus.org</code>).	Reads answer at once. Acts pause for your signature.
Find agents	Searches the public registry, through your agent, for agents that do what you want — a ministry with a study on a topic, a service that offers a capability.	No
Inspect an agent	Looks at one agent's public card before you talk to it: who it says it is, what it offers, whether the card it serves still matches its records.	No
Engage an agent	Sends your words, as you, to another agent and brings back its answer — a study plan, what it offers, an answer from its own records. Your agent sends the message and keeps the record; the other agent sees only your message.	No (the other agent decides what to do with its own things)

Ability	What it does	Changes anything?
My runs	Lists what you have asked your agent recently — from Claude, from your Home, from anywhere — and which runs are waiting on you.	No
Run details	One run in full: what you asked, the plan, each step's outcome, the receipts (with the transaction when a step left one), and where its provenance record is.	No
Where to sign	For a run that paused for your authority: the link to the page at your Home where you sign, and nothing else.	No — you do, at your Home

There is deliberately **no** payment tool, no “read the vault” tool and no “grant permission” tool. What your agent can do is whatever its playbook says it can do; Claude only sees the door.

4. Things to try

Type these as you would say them. Claude decides which ability to use; you do not have to name it.

Your own records and organizations

Which organizations do I belong to, and what is my role in each?
 Ask Missio Nexus's agent who its members are.
 What does my household record say? Who is in it?
 What is the balance of my treasury?

Your agent answers from your records (or the organization's) and tells Claude which records it read. Nothing here needs a signature.

Finding and talking to other agents

Find agents that offer study plans about justification.

Claude asks your agent to search the registry. You get a short list — name, what each offers, how relevant it is.

Before we contact Ligonier, check who ligonier.svc says it is.

Claude fetches the agent's public card through your agent and tells you whether it still matches its records.

Ask Ligonier for a four-week study plan on justification, one session a week, with links.

Your agent sends your words to Ligonier's agent as you. The reply is Ligonier's own — made from its own catalog under its own rules — and Claude presents it as such, keeping every link it gave. Your agent records that the hop happened.

Ask Missio Nexus's agent to find a Somali-language discipleship resource for our team.

You can ask at an organization you belong to; the organization's agent answers under your standing there.

Things that need your signature

Send 20 USDC to Alice from my treasury.
Invite Nathan to Missio Nexus.
Charter a team called Outreach under Missio Nexus.

Your agent prepares the act and stops: Claude will tell you it needs your authority and give you a link to your Home. Open it, review what will happen (who, how much, to whom, until when), and sign. Then say:

Done — finish that run.

Claude picks the run back up and your agent completes it under the permission you just signed. The receipt names your signature; Claude never had it.

Looking back

What did my agent do for me this week?
Show me the details and receipts for the payment run.
Which of my runs are still waiting on me?

Teaching your agent how you like things

From now on, when I ask about my treasury, always show amounts in USD too.

That becomes a standing instruction of your agent's — not Claude's — so it applies at your Home and everywhere else too, and you can remove it at your Home whenever you like.

5. What the replies mean

Your agent answers in a few well-defined ways. Claude will explain them, but here is the key:

You see	It means	What to do
An answer	A read: your agent looked at the records and told you what they say, and which ones it read.	Nothing.
Done	An act finished, under a permission you signed. There is a receipt.	Ask for the details if you like.
A question	Your agent needs a detail — which Alice, which account.	Answer in the chat; Claude passes it on.
Authority required	The act needs your signature.	Follow the link to your Home, sign, then tell Claude to finish the run.
Refused	Your agent will not do it — you do not have standing for it, it is outside your agent's playbook, or the request was ambiguous. The reason is stated.	Rephrase, or ask at your Home. A refusal is your agent protecting you; Claude cannot argue it out of one.
Please reconnect	The permission this connector held was revoked or has expired.	Reconnect from Settings → Connectors; you will sign in at your Home again.

Two things you will never see: a reply that pretends to be Claude's own knowledge (it is always your agent's, with its source), and an act that happened without a signature of yours behind it.

6. Staying in control

- **See what is connected.** At your Home, open **Connected apps → Connected assistants**. Each entry is a permission you signed; this connector is one of them.
- **Revoke at any time.** Click **Revoke** there. The permission is disabled on chain immediately. Claude's next request is refused and Claude asks you to reconnect. Nothing that already happened is undone — receipts stay.
- **Nothing is hidden in Claude.** Every run made through Claude appears in your Home's **Activities** exactly like a run you made there, marked as having come through this connector.
- **Other people's things stay theirs.** Your agent holds your records. Another person's household, another organization's roster — your agent will tell you whose agent holds that, not read it for you.
- **Up to 25 connectors.** You can connect several assistants or devices; each gets its own permission and can be revoked on its own.

7. If something does not work

Symptom	Likely cause	Fix
Connect button opens your Home but you cannot sign in	No passkey on this browser or device	Sign in at www.faithnet.me directly first, add a passkey for this device under Security , then connect again.
Claude says the connector needs to reconnect	You revoked it, or the permission expired	Settings → Connectors → your connector → Connect .
“No agent is registered as ...”	The organization name is not its registry name	Use the name as it appears at your Home (for example missio-nexus.org), or ask “which organizations do I belong to” first.
An act is stuck “waiting”	You have not signed yet	Ask Claude for the link (“where do I sign for that run?”), sign at your Home, then “finish that run”.
“Refused — no standing”	You are not a member or steward of that organization	Ask your own agent instead, or ask the organization’s steward to invite you.
Too many requests	Rate limit	Wait a minute and try again.

8. Questions people ask

Does Claude see my private records? Claude sees what your agent replies — the answer to your question — not your vault. Your agent decides what a reply may contain, the same as it would at your Home.

Can Claude spend my money or invite people without me? No. Those acts pause at your agent until you sign at your Home with your own credential. The connector’s permission is “ask as me”, not “act as me”.

What if someone gets into my Claude account? They could ask your agent questions as you. They could not sign anything. Revoke the connector at your Home (**Connected apps → Connected assistants**) and it stops at once.

Is this the same as Claude’s own memory? No. Standing instructions and remembered choices live with your agent and apply everywhere you use it. You manage them at your Home.

Where is the record of what happened? On your agent. Ask Claude for a run’s details, or open **Activities** at your Home. Each run has a provenance record — a formal,

checkable account of what was read, what was done and under which permission — that anyone you share it with can verify independently.
